

H R SOORYA DEV

89219-83063 | hrsoorya2006@gmail.com | [linkedin.com/in/hrsd](https://www.linkedin.com/in/hrsd) | github.com/Victor-Xtreme

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL, Lua
Embedded System Software: Arduino, ESP32, Wi-Fi, Sensors and Modules
Frontend: React, Next.js, HTML5, CSS3, TailwindCSS
Backend: Node.js, Flask, FastAPI, MySQL
Tools: Git, GitHub, Docker, Linux, LaTeX, LLM
Concepts: Embedded System Constraints, Data Structures & Algorithms, Scalable System Design, RESTful Architectures, OOP, Full-Stack Engineering

PROFESSIONAL SKILLS

- Leadership | Technical Communication | Team Collaboration | Analytical Thinking | Technical feasibility evaluation | Constraint-oriented design thinking

EDUCATION

National Institute of Technology, Calicut Kozhikode, Kerala, India
B.Tech in Computer Science and Technology **CGPA: 9.47 / 10** — 2025 – 2029

- Member, Competitive Programming, Google Developer Student Clubs NITC (2026 – Present)
- Member, Embedded Systems, Google Developer Student Clubs NITC (2026 – Present)
- Member, FOSSCell NITC, (2026 – Present)
- Member, Drama Crew NITC, (2025 – Present)

ST Peter's HSS, Kolenchery Kerala, India
Computer Science 2022 – 2024

EXPERIENCE

Event Logistics Associate Sept 2025 – Oct 2025
Tathva

Public Relations and Communications Executive Sept 2025 – Nov 2025

- Reached out to students through calls and messages to inform them about events, workshops, and participation opportunities
- Drafted clear, neutral communication for event updates and conflict resolution across student groups.
- Coordinated and assisted in maintaining smooth communication channels between organizers and student communities

Poster and Design Oct 2025 – Nov 2025

- Designed posters and props, ensuring a consistent and visually appealing presence.

ACHIEVEMENTS

Code.Init Feb 2026
4th Place NITC

JEE Mains Apr 2025
Rank 7971 | 99.48 Percentile All India

Ragam Drama Competition Mar 2026
2nd Place NITC

- InboxZero - Gmail Extension** | *Manifest V3, JavaScript, Gemini 2.5 Flash Lite* 2026
- Built AI-powered Gmail extension performing deterministic 3-bullet summarization and strict single-label categorization directly via DOM parsing and UI injection.
 - Implemented hybrid spam engine combining Gemini inference with modular weighted heuristics (0–100 score) using domain, URL, phishing, and pattern analysis.
 - Designed Manifest V3 architecture with background service worker, content-script messaging, and modular Gmail parser + UI injection pipeline.
 - Developed fully client-side secure key handling (chrome.storage.sync), adjustable spam sensitivity, and enforced prompt-output constraints for consistent inference.
- GeneScope** | *FastAPI, React, Ingenious Mathematical Risk Scoring System* 2026
- Developed web-based genetic risk assessment platform predicting 10 inherited diseases via weighted clinical scoring.
 - Designed transparent risk model combining Family (40%), Lifestyle (35%), and Lab Values (25%) with Class I–IV stratification.
 - Built personalized prevention engine generating screening plans, urgency levels, and consultation guidance.
 - Implemented full-stack architecture (FastAPI backend + React/Vite frontend) with explainable outputs and rule auditability.
- Grid-X - Distributed Compute Mesh** | *FastAPI, WebSockets, Docker, TypeScript SDK* 2026
- Designed coordinator-worker distributed architecture for isolated Python job execution across LAN nodes.
 - Built FastAPI scheduler with HTTP + WebSocket endpoints for real-time job streaming and worker state tracking.
 - Implemented Docker-backed worker agents with resource monitoring and task lifecycle management.
 - Developed modular TypeScript SDK for job submission, worker registration, and credit-based execution logic.
- Plastopol Polymers Website** | *Typescript, Rust(Tauri), Tailwind* 2026
- Engineered a lightweight, responsive corporate website for Plastopol Polymers using TypeScript and Tailwind CSS with emphasis on performance and maintainability.
 - Developed a desktop-based content management system using Rust and Tauri, enabling non-technical stakeholders to manage and update website content efficiently.
 - Deployed and maintained the production website on Cloudflare Pages with direct GitHub integration for automated CI/CD-driven content updates.
- Typing Blind** | *Embedded C++, Python, ESP8266* 2025
- Developed a real-time typing evaluation system with microcontroller-assisted auditory feedback for interactive typing speed assessment.
 - Implemented dual-mode input handling supporting both Morse code transmission and conventional keyboard typing workflows.
